

Our core values and what we offer

This is FB Kedjor

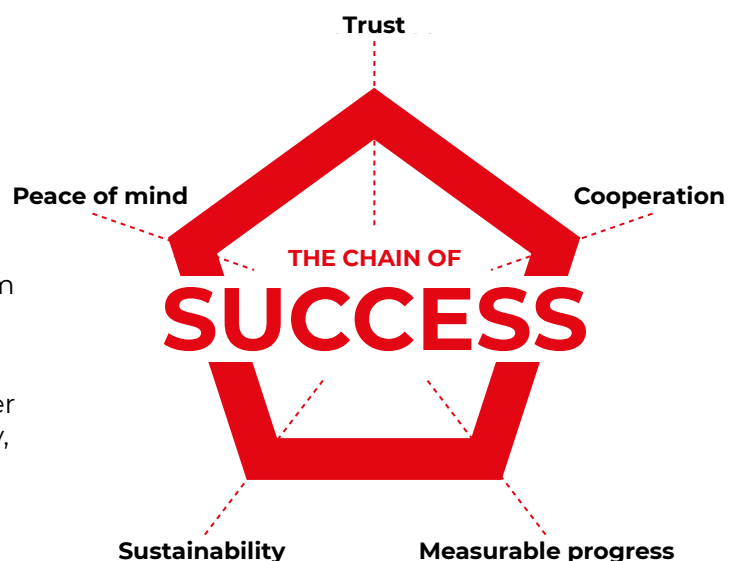

FB Kedjor develops, manufactures and sells high-quality chains and associated equipment for industry and the public sector. Our products make operations safer while remaining resource- and cost-efficient. With over 100 years in the industry, the company holds extensive experience and knowledge, which we put to use when developing new products and pioneering technical solutions. At FB Kedjor, we like to stay ahead of the curve. We're driven by solving our customers' challenges and always add technical and economic value. Think of us as your natural partner and adviser when it comes to mechanical conveyor equipment.

Our vision

Our vision is to make a difference for people, environment and industry.

We believe in a sustainable world where people evolve, are given peace of mind and feel secure. Through trust we build long-term relationships, because working together has the greatest impact.

In long-term partnerships, we work together towards measurable progress, sustainability, and a planned workday with peace of mind as the goal.

Here is where you can find us

You can find our headquarters and warehouse in Eskilstuna.

FB Kedjor in the world

FB Group has 170 employees and operates globally with a local presence in eight European countries.

FB Kedjor AB, Sweden

FB Kjeder AS, Norway

FB Chain Ltd, UK

FB Ketjutekniikka OY, Finland

FB Ketten GmbH, Austria

FB Ketten GmbH, Germany

FB Chaines Sarl, France

FB Ketten, Switzerland

Sustainability is the foundation

At FB Kedjor, people, the environment and sustainability are always our starting point when developing new solutions and products. For a company to remain viable and grow, sustainability needs to run through everything the business does. That means making the most of people's knowledge and insight,

and ensuring work is carried out safely from a working-environment perspective.

It's also about maximising the benefit gained from energy and resources. Through innovative industrial solutions, we have the opportunity to make a difference together.

EcoVadis

Each year, FB Kedjor undergoes a thorough evaluation of our sustainability practices through EcoVadis, a global leader in corporate sustainability assessments. In our latest assessment, completed in January 2026, we were awarded a Gold Medal, placing FB Kedjor in the top 5 percent globally.

ISO 9001:2015

FB Kedjor AB is certified according to ISO 9001:2015. This ensures that we deliver products and services that consistently meet customer requirements and that we comply with statutory and regulatory requirements.

ECOSAVING

Environmental threats

The threat of climate change keeps growing, and its consequences are becoming ever more apparent. Global warming is driving catastrophic effects such as melting glaciers, rising sea levels, more intense extreme weather and collapsing ecosystems. Social instability caused by shortages of food, water and resources is becoming unavoidable, threatening health, the economy and security as serious demographic shifts, crises and conflicts emerge. There's still hope though, and it's high time for us to take responsibility and start to think along new lines. Join us on a transition that doesn't have to be costly, quite the opposite: there's significant economic gain to be made too.

ECOSAVING—part of the solution

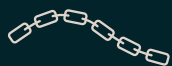

With ECOSAVING, you contribute to your company's environmental work. The service delivers documented ecological and economic savings: CO₂ reductions, lower water and energy consumption, and a better overall economy. The results can be reported in your Scope 3 reporting.

ECOSAVING aims for economic and ecological profit

- CO₂-savings
- Reduced water consumption
- Reduced energy consumption
- Better overall economy
- Used for your company's Scope 3 reporting

How does ECOSAVING work?

Smaller amount of produced material

Longer service life

Lower weight

Higher capacity

Our services

The services FB Kedjor offers are there to increase value and safety for you, the customer. They make your working day simpler while also improving your overall finances. This is achieved by planned maintenance and regular inspections and status assessments. We also offer training for your personnel, to ensure that operation is as safe and efficient as possible.

Inspections

Regular inspections ensure that you are aware of the chains' status and the condition of the peripheral equipment. They provide a good foundation for service planning and a safer working environment.

Service

With our "rolling workshops" we offer fast and efficient service throughout the Nordic region. Regular servicing and planned maintenance guarantee a longer life for your machinery and equipment, while also minimizing the risk of sudden, costly stoppages.

Installation

When you buy chains and equipment from FB Kedjor, we can also fit and install them—whatever the size and complexity of the project. Our installation engineers undergo rigorous training and have specific FB certification. This guarantees safety, quality, efficiency and customer satisfaction.

Consulting services

Our long and far-reaching experience makes us the ideal business partner when it comes to new technical solutions. We often develop these solutions in association with our sister companies in the Addtech group. This means that as a customer, you have access to an extensive network of cutting-edge skills and expertise.

Training

Training of operations and maintenance personnel prevents both downtime and workplace accidents. Maintenance becomes more extensive and leads to greater efficiency, a better working environment, and better finances for your company.

The right chain for the right application

At FB Kedjor, we start from the specific conditions of your conveyor and find the optimal solution for minimal maintenance and the best profitability, in a sustainable way. Thanks to our in-house manufacturing and product development, we can offer a tailored concept that improves your application.

FB TOUGH™

FB TOUGH™ solutions are used in extremely tough environments with heavy impacts, high loads and severe wear. Examples include timber-handling conveyors, rock and mineral conveyors, and scrap conveyors, such as for electrical equipment containing quartz and other hard minerals.

FB HEAT™

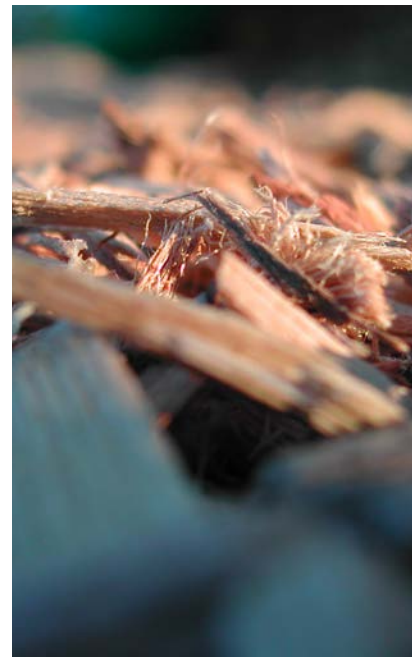

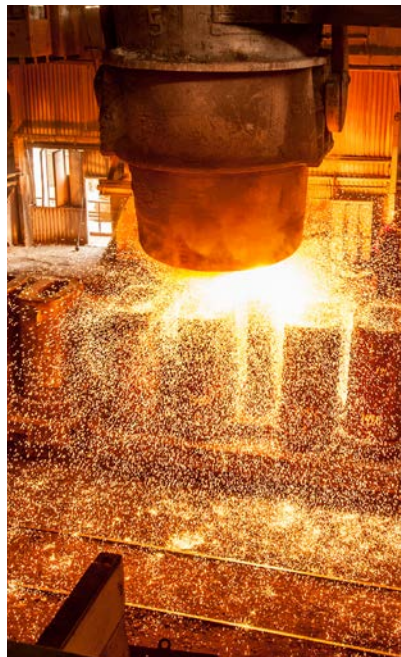

FB HEAT™ solutions are used in high-temperature applications, such as high-temperature ash conveyors or industrial furnaces.

FB HYDRO™

FB HYDRO™ solutions are used in environments with varying pH levels or moisture that cause corrosion challenges for chains, sprockets and wear rails. Examples include bark, chip or shaving conveyors at sawmills, and solid-fuel or waste conveyors at heating and power plants.

FB HYBRID™

FB HYBRID™ is a concept developed to handle the market's most demanding operating environments, where properties from the HEAT, HYDRO and/or TOUGH concepts need to be combined. For instance, applications with extreme wear, heavy shock loads, corrosion challenges and/or high temperatures all at once.

FB NewStandard™

When you don't settle for standard

Over the years, we've developed and improved the material in our chains. The result is premium quality at a standard price. Our welded conveyor chains, manufactured by FB Ketju in Finland, gives you higher performance, longer service life and greater reliability than before, without costing more.

If you're not satisfied with standard, contact your nearest sales representative!

67%

higher tensile strength compared with ISO/DIN/SMS.

1,5

times harder side plates compared with standard.

2,25

times higher yield strength in side plates compared with standard.

FB Infinity™

Infinite strength. Minimal climate impact.

The chain of the future is here—FB Kedjor proudly presents the world's first chain made from SSAB Zero™ material.

FB Infinity™ was born from the need to combine industry's demand for extreme performance with society's demand for climate-neutral production. FB Infinity™ combines superior reliability, strength and circular sustainability. The series is created for companies that want to lead the way: technically, economically and environmentally.

Use FB Infinity™ and build your company's brand together with us!

67%

higher tensile strength compared with ISO/DIN/SMS.

2,5

times harder side plates compared with standard.

3,5

times higher yield strength in side plates compared with standard.

70-75%

reduced CO₂ emissions on the product.

Enabling sustainable performance

The fossil carbon emissions in SSAB's production of SSAB Zero™ are

<0.05

kg CO₂e/
kg steel

in Scope 1 and 2 of the GHG Protocol.

Our products

Large standard stock for fast delivery

FB Kedjor keeps a large supply of spare parts to help assure our customers' operations. It is always well-stocked and optimized, as many years of selling chains have taught us what our customers need, and when. From receiving an order, our warehouse dispatches within 24 hours. At FB Kedjor you will find:

Roller chains

Roller chain sprockets

Conveyor chains

Conveyor chain sprockets

WHX chains

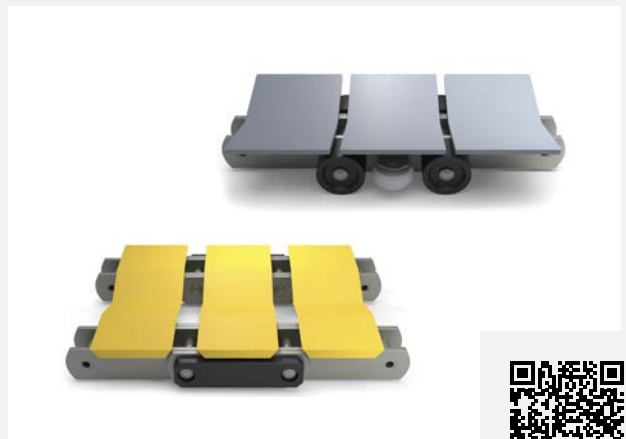

Sharp top chains

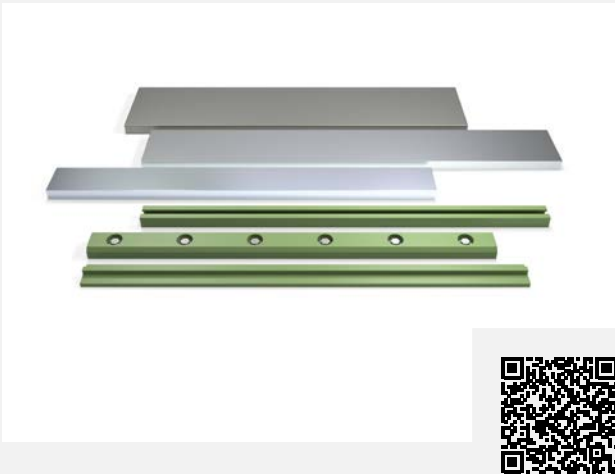

Leaf chains & accessories

Lamella chains

Wear rails & guide rails

Scraper chains

Chains & belts, food industry

Custom chains

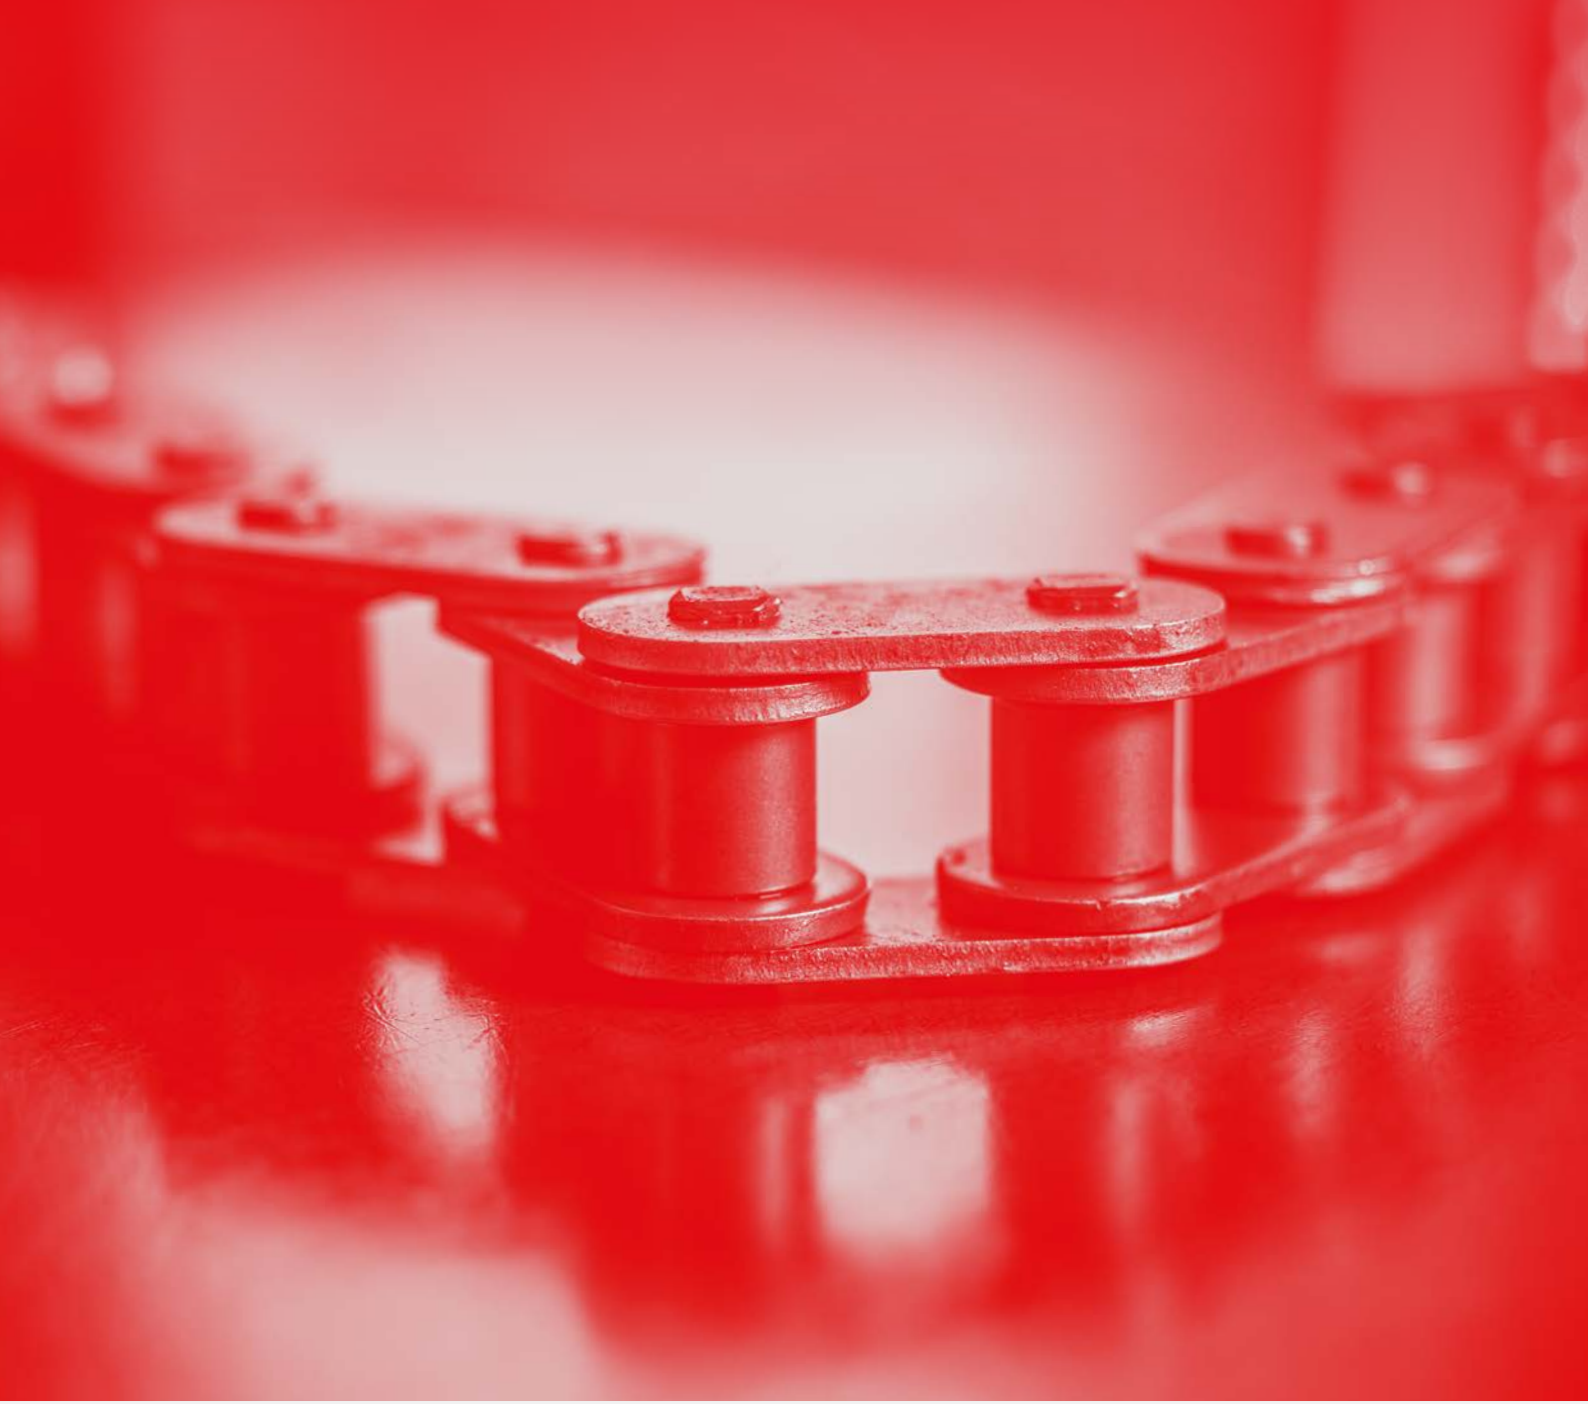

Bark shredders

Conveyors

Lubrication System – Rotalube®

Want to improve your company's economy, contribute to a better working environment and reduce your environmental impact? Rotalube® lubrication system helps you get there. Rotalube® is a unique lubrication system that applies the right amount of lubricant to exactly the right spot, every time.

Benefits of Rotalube®

Reduces maintenance time

Enables safe and easy lubrication of inaccessible chain drives, without removing safety guards, even during operation.

Reduces chain wear

Optimal chain lubrication has been shown to extend the service life of chains, sprockets and chain rails by up to 60 times.

Reduces oil consumption

This results in a significant reduction in costs, particularly for expensive lubricants.

Reduces operating noise

Well-lubricated chains run more quietly, significantly reducing noise in the working environment.

Reduces production defects

Reliably minimises contamination and soiling of your product.

Reduces environmental pollution

Minimises contamination, as precise lubrication reduces the amount of excess lubricant.

Reduces your costs

Less friction means lower energy consumption—which shows up clearly on your electricity bill.

Bark shredders and conveyors

Maximize the quality of the bark

FB Kedjor manufactures and supplies the market with bark shredders in four different models, depending on the capacity required for your facility. The shredders are designed to last, run quietly and be easy to service. Wear parts and spare parts are supplied from stock, and we also carry out inspections, servicing and repairs of shredders.

Benefits of a bark shredder from FB Kedjor:

- Runs quietly—good for noise requirements and from a working-environment perspective.
- Safe, and stays together even if scrap material passes through it.
- Fitted with doors and hatches for easy access to wear parts, giving efficient and safe maintenance.
- Shredder housing fitted with heavy-duty, replaceable wear plates on the inside for a long service life.
- The rotor's flails come as standard fitted with reversible blades for simple, cost-effective maintenance.
- The shredder's grate is easily adjusted to the desired material fraction.

Eskilstuna Energi & Miljö

Eskilstuna Energi & Miljö's combined heat and power plant has invested in a reject crushing line from FB Kedjor. It is a successful local collaboration that allows EEM to utilize all its fuel. Thanks to this, EEM reduces its CO₂ emissions by 27 tonnes annually by cutting down on material transport.

Torbjörn Bånkestad, a maintenance planner at EEM, explains: "We receive fuel containing pieces that are too large to burn directly. The material needs to be crushed into smaller fractions so we can utilize it. Thanks to this excellent system—designed, manufactured, and installed at our site by FB Kedjor in partnership with BT Konstruktion, we can crush the forest fuel and transport it directly into our tipping hopper via chain conveyors. The equipment consists of a feed table loaded by a wheel loader, followed by a scraper conveyor leading to the crusher—a FBWRS 10-11V unit that is top-fed and breaks the material down to the desired size before it drops into a feed screw that conveys the fuel into the tipping hopper."
